

When the user chooses out application this is the splash screen that appears when the application is loading before the first messages comes up

The user would then login in with their bank information then log in to have access to their financial account.

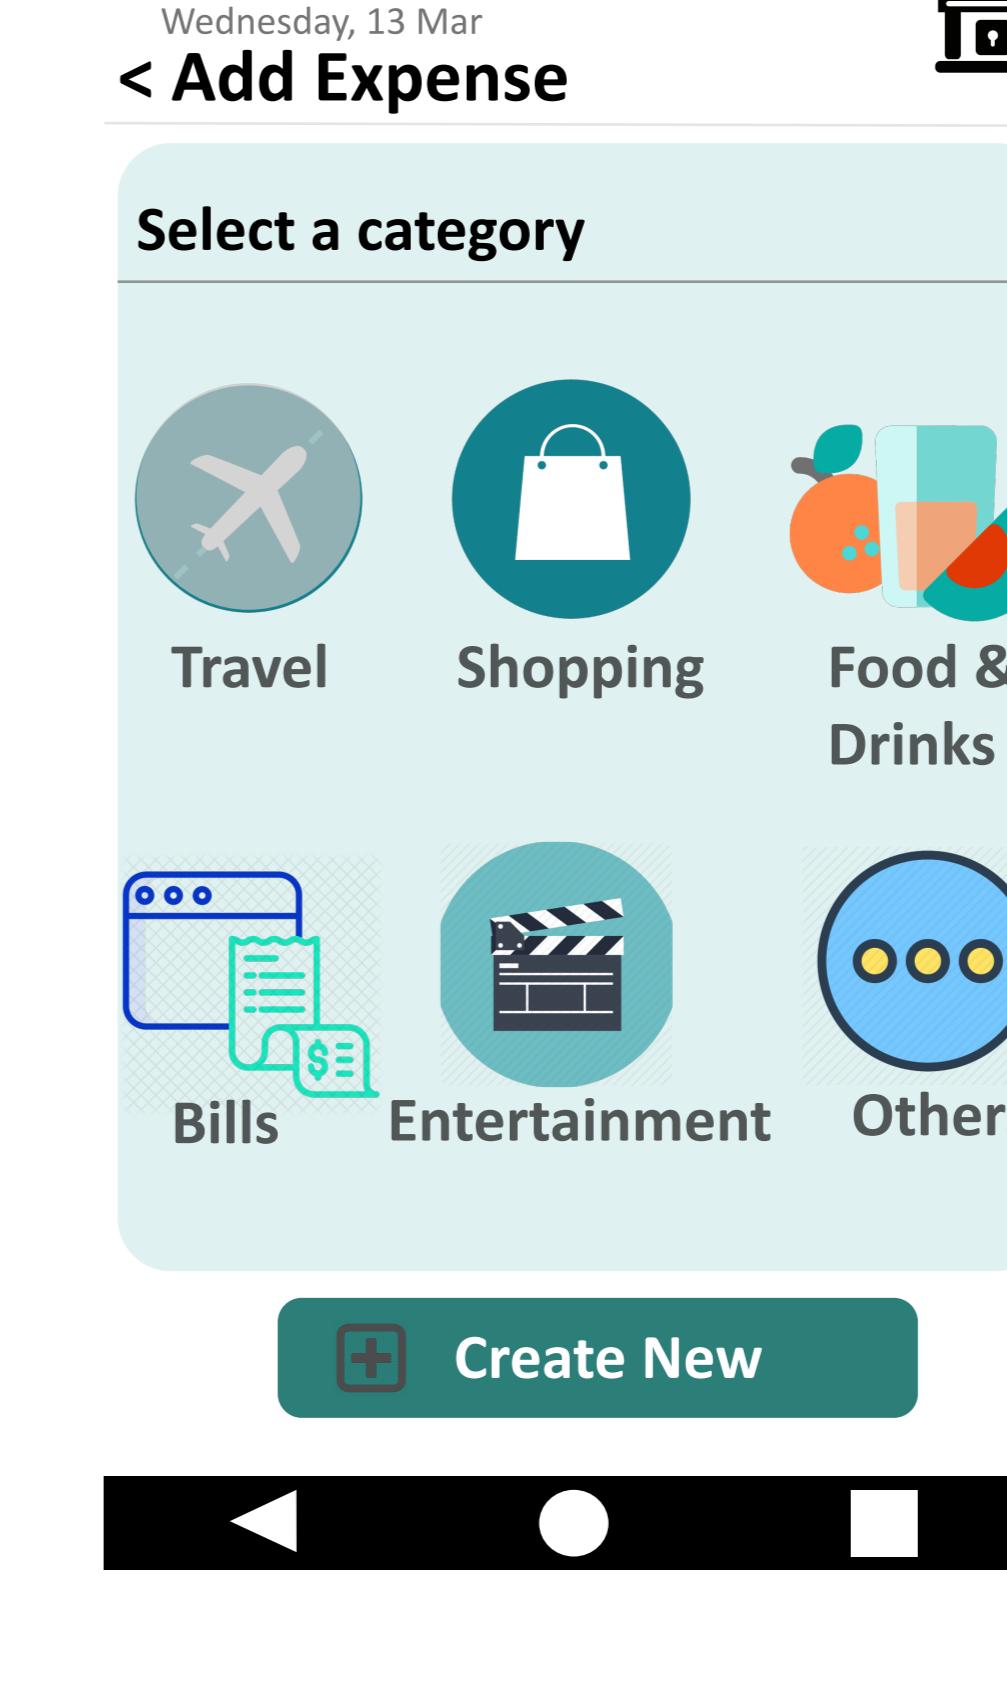

The user can check out their expenses and manage their finance.

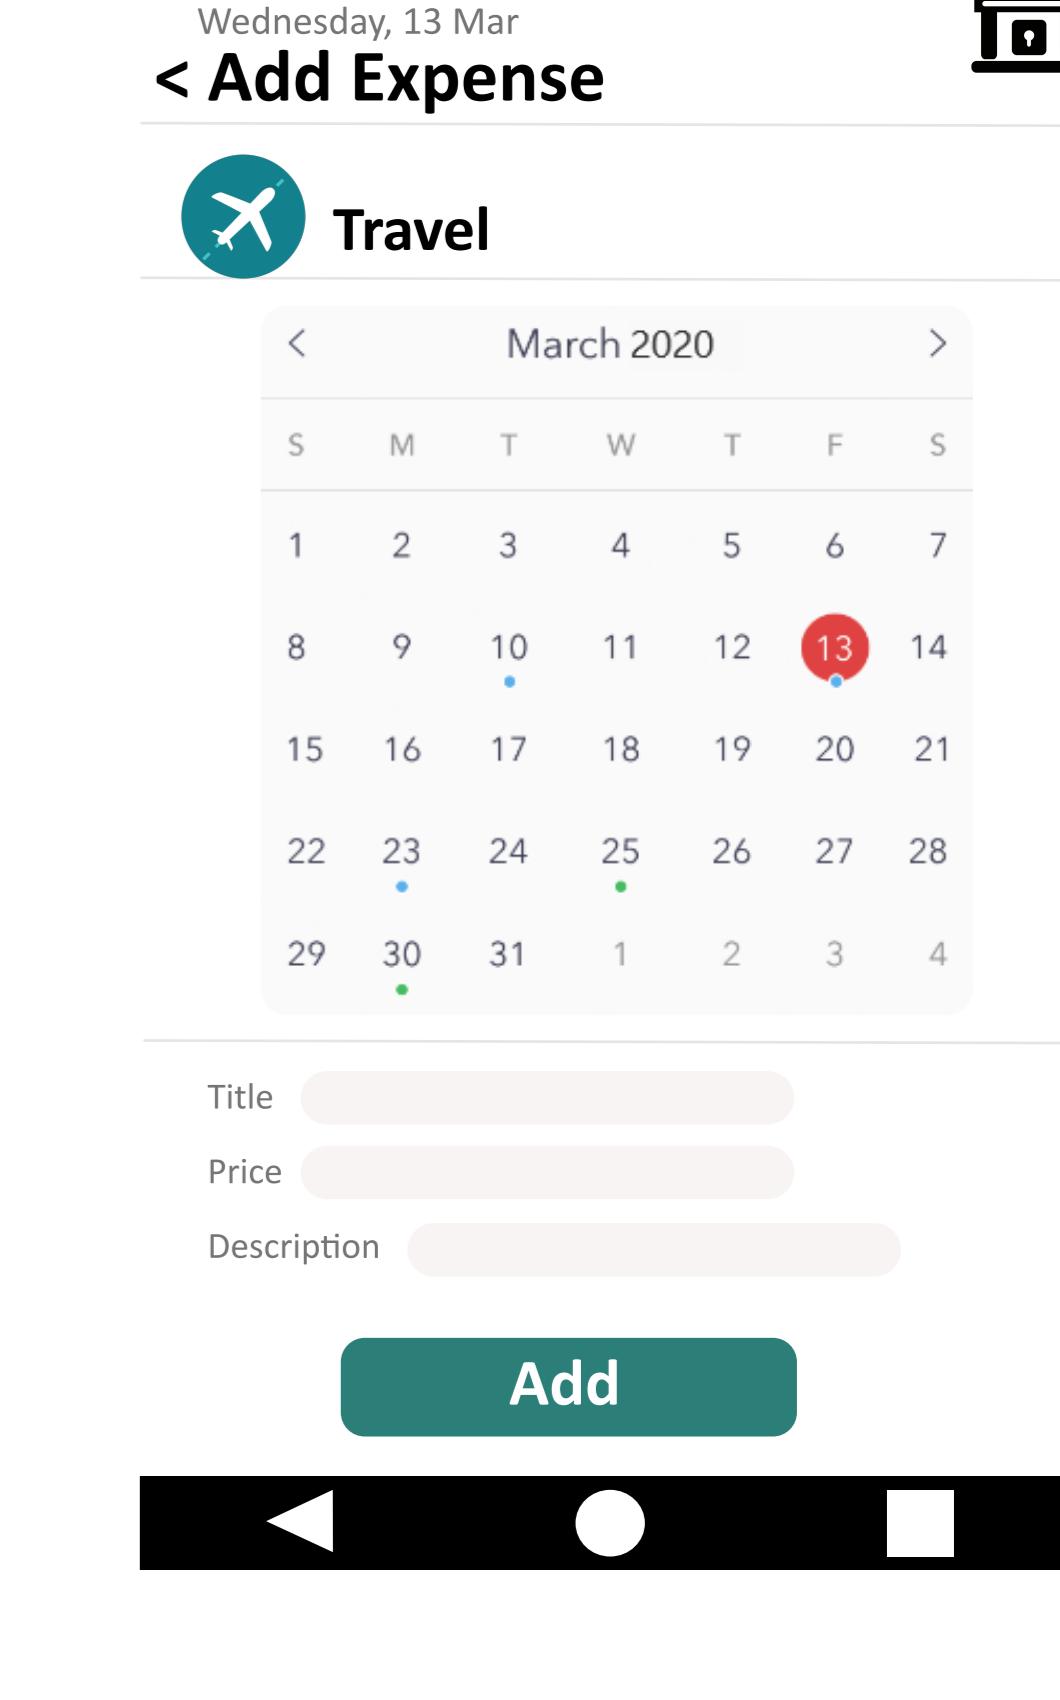

The users can check their finance by choosing expenses, in there they would be able to add plans with the dates they want. They can create payment plan where the payment gets forced once they can is confirmed and the user can go back and cancel this task if he/she wishes.

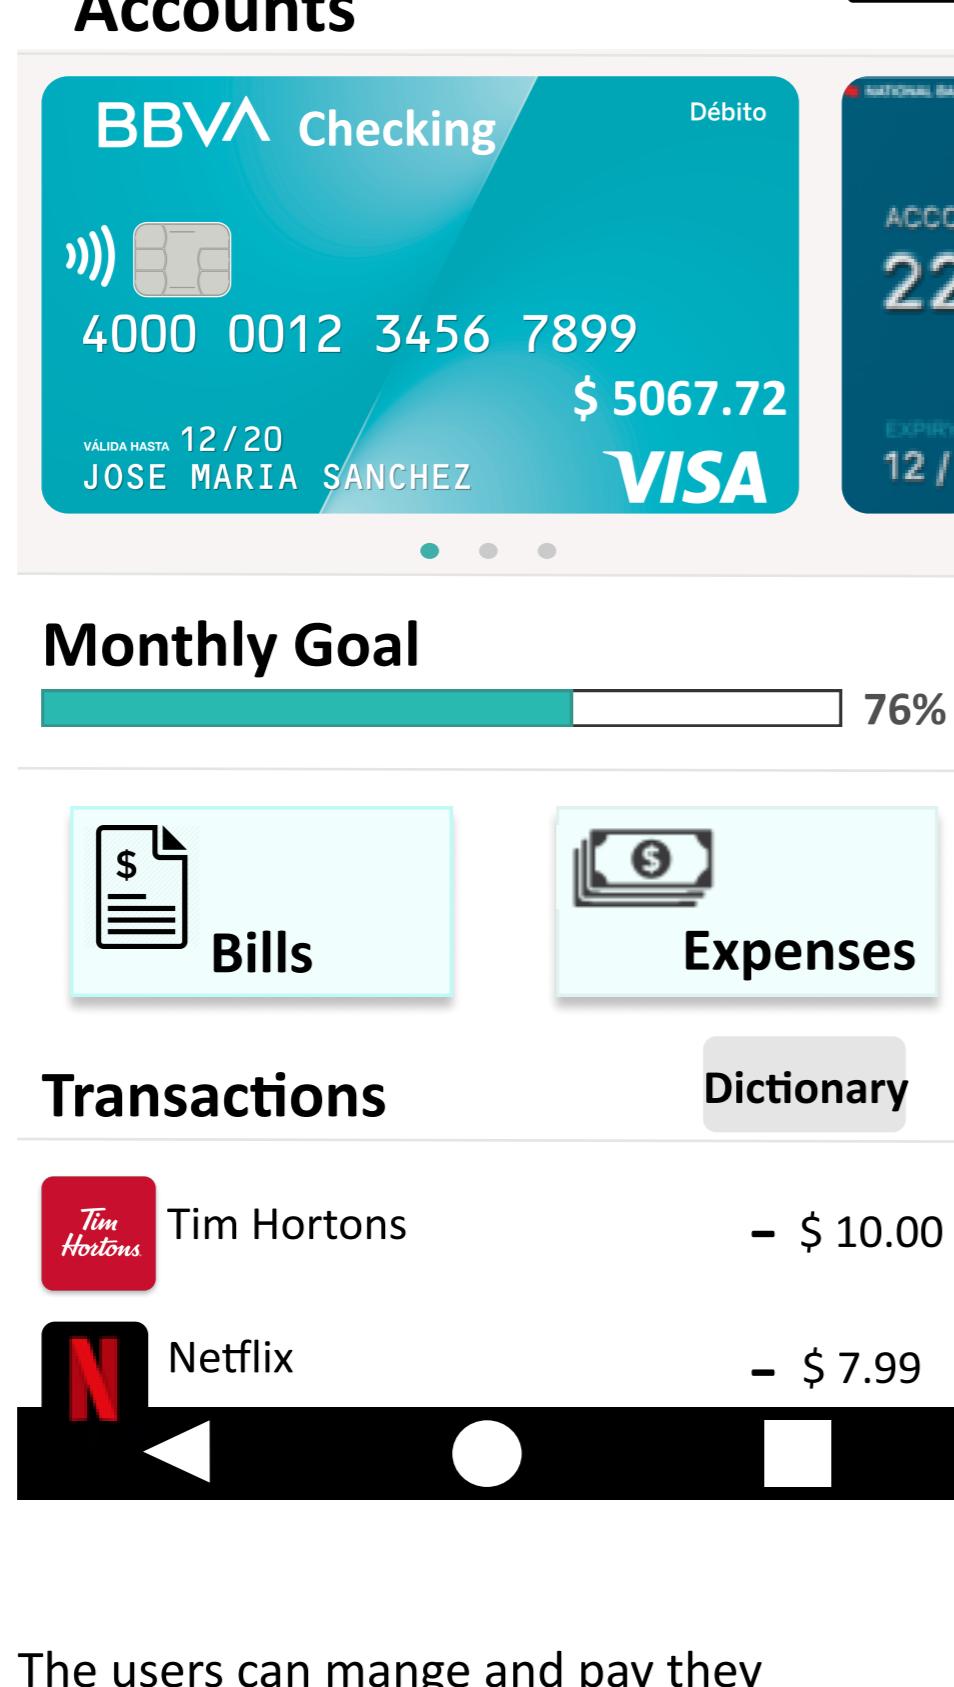

Here is the expenses screen the user can check out the day and the money that has been proceeded based on plan. The users can check the days where the money is taken from the account and see the overall expense of the month.

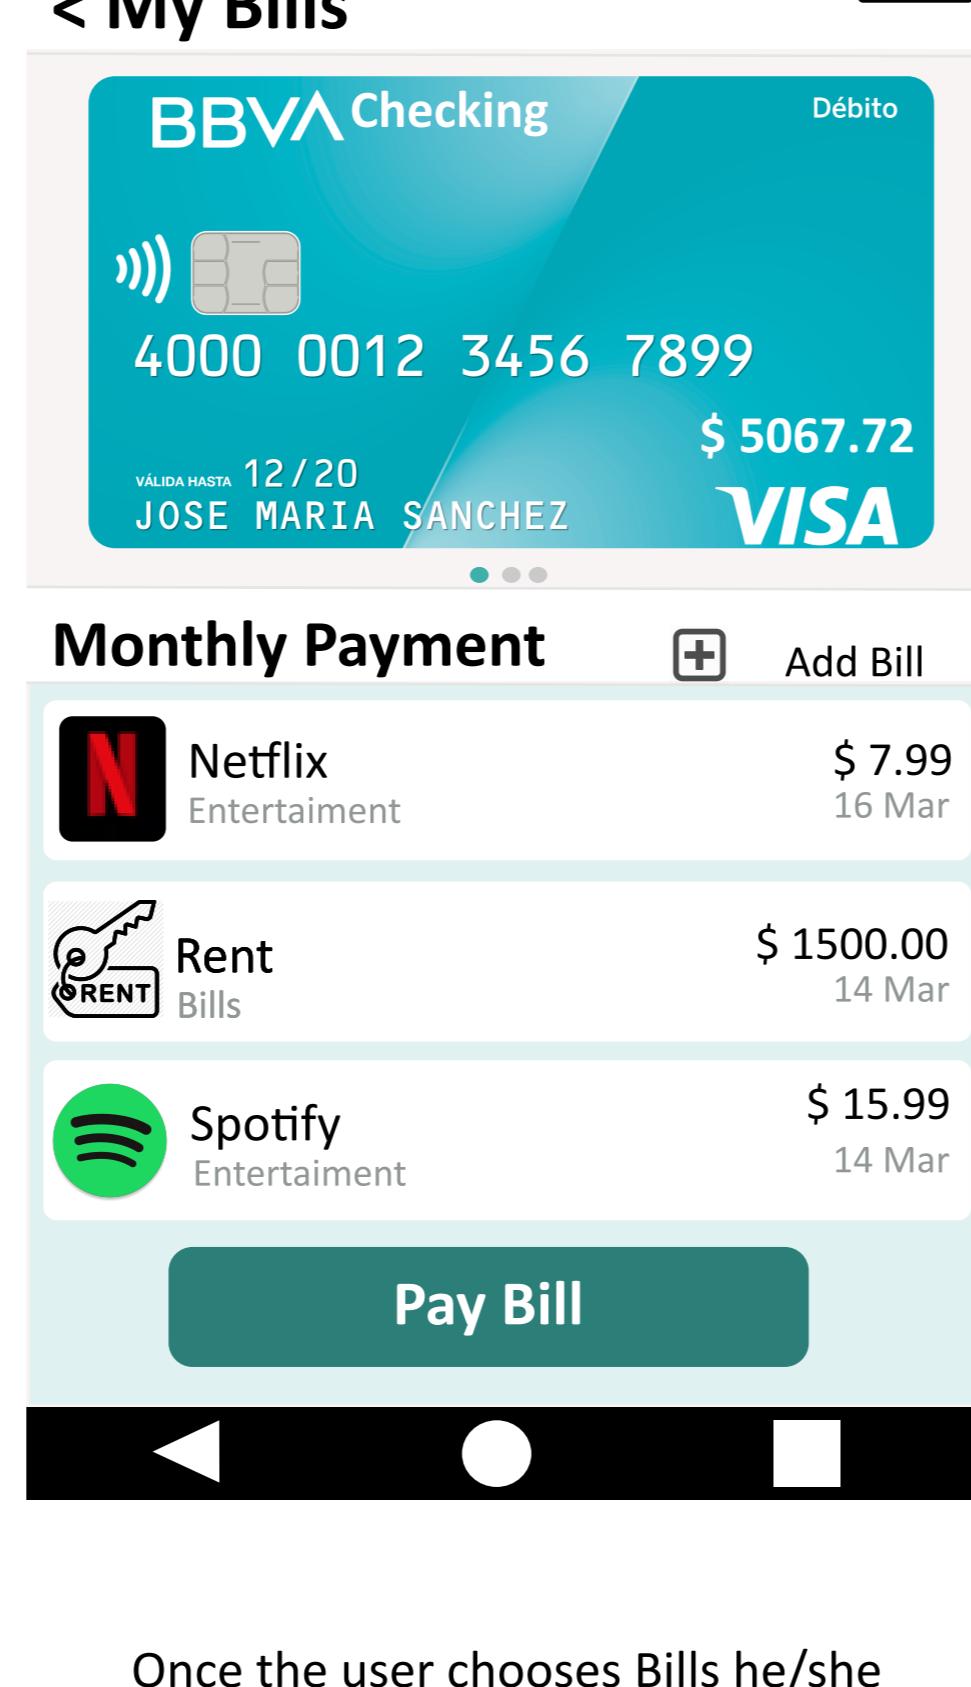

The user can add an expense choose from the list of create a new one this will have the account and the information about the person receiving.

Once the user creates a new expense he/she chooses the date and puts the information then adds it and it will send notifications as reminder

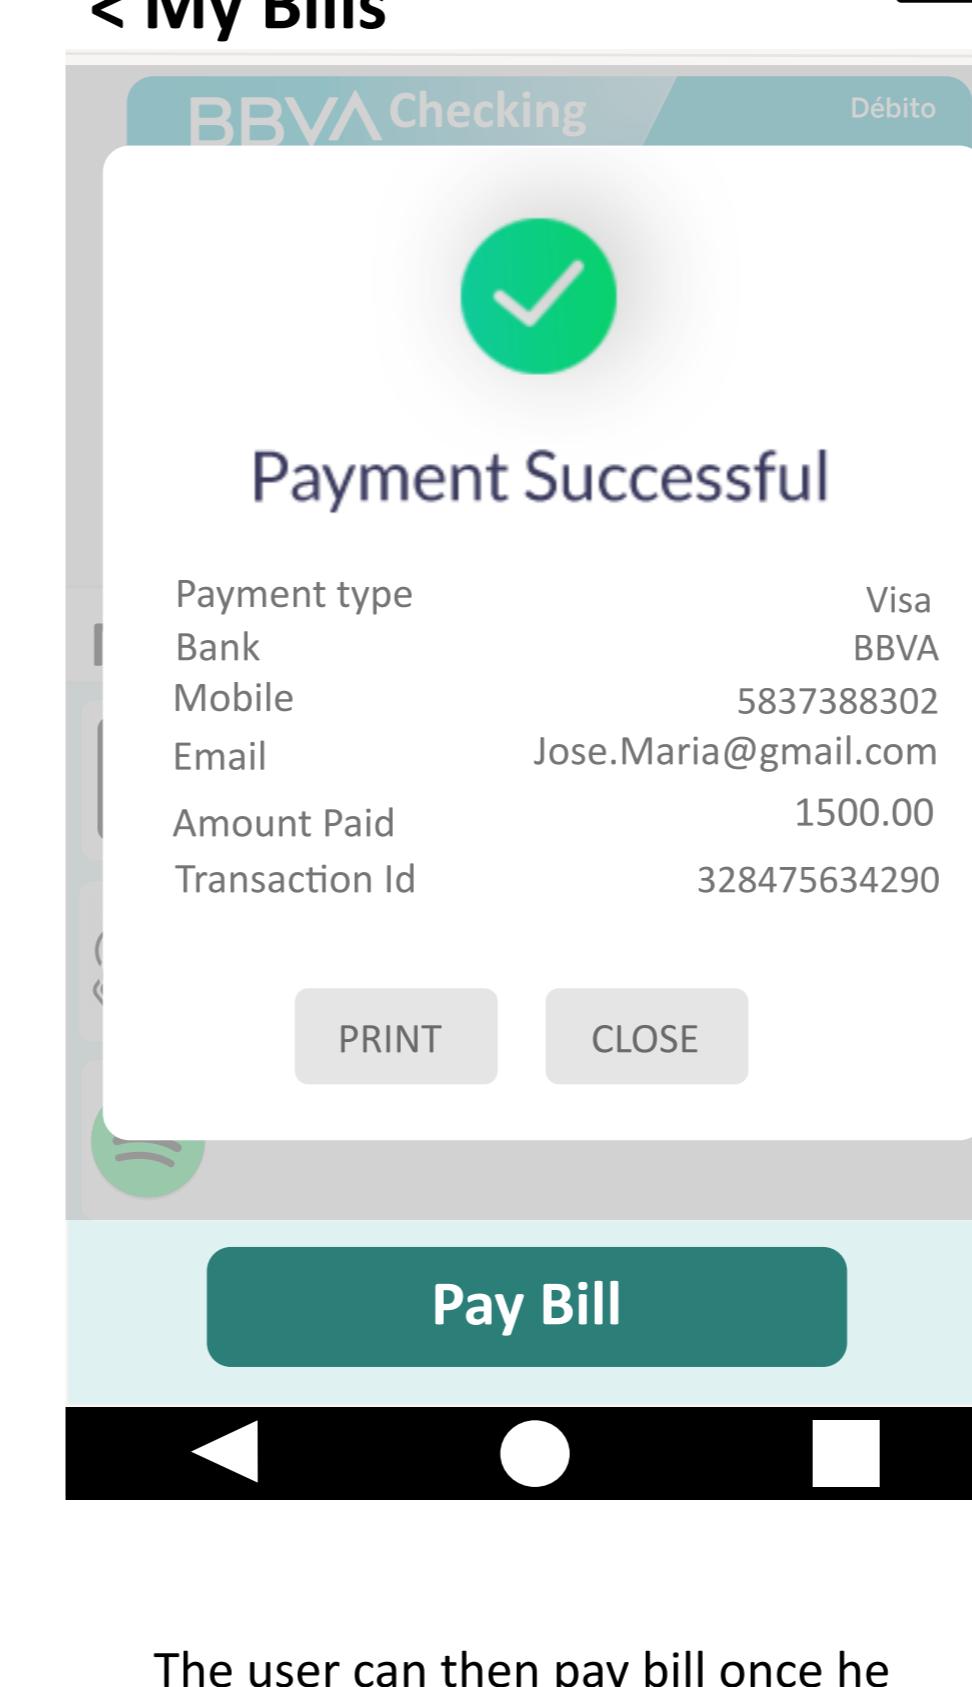

The user can mange and pay bills, these bills are different than expenses are they are only one time payment.

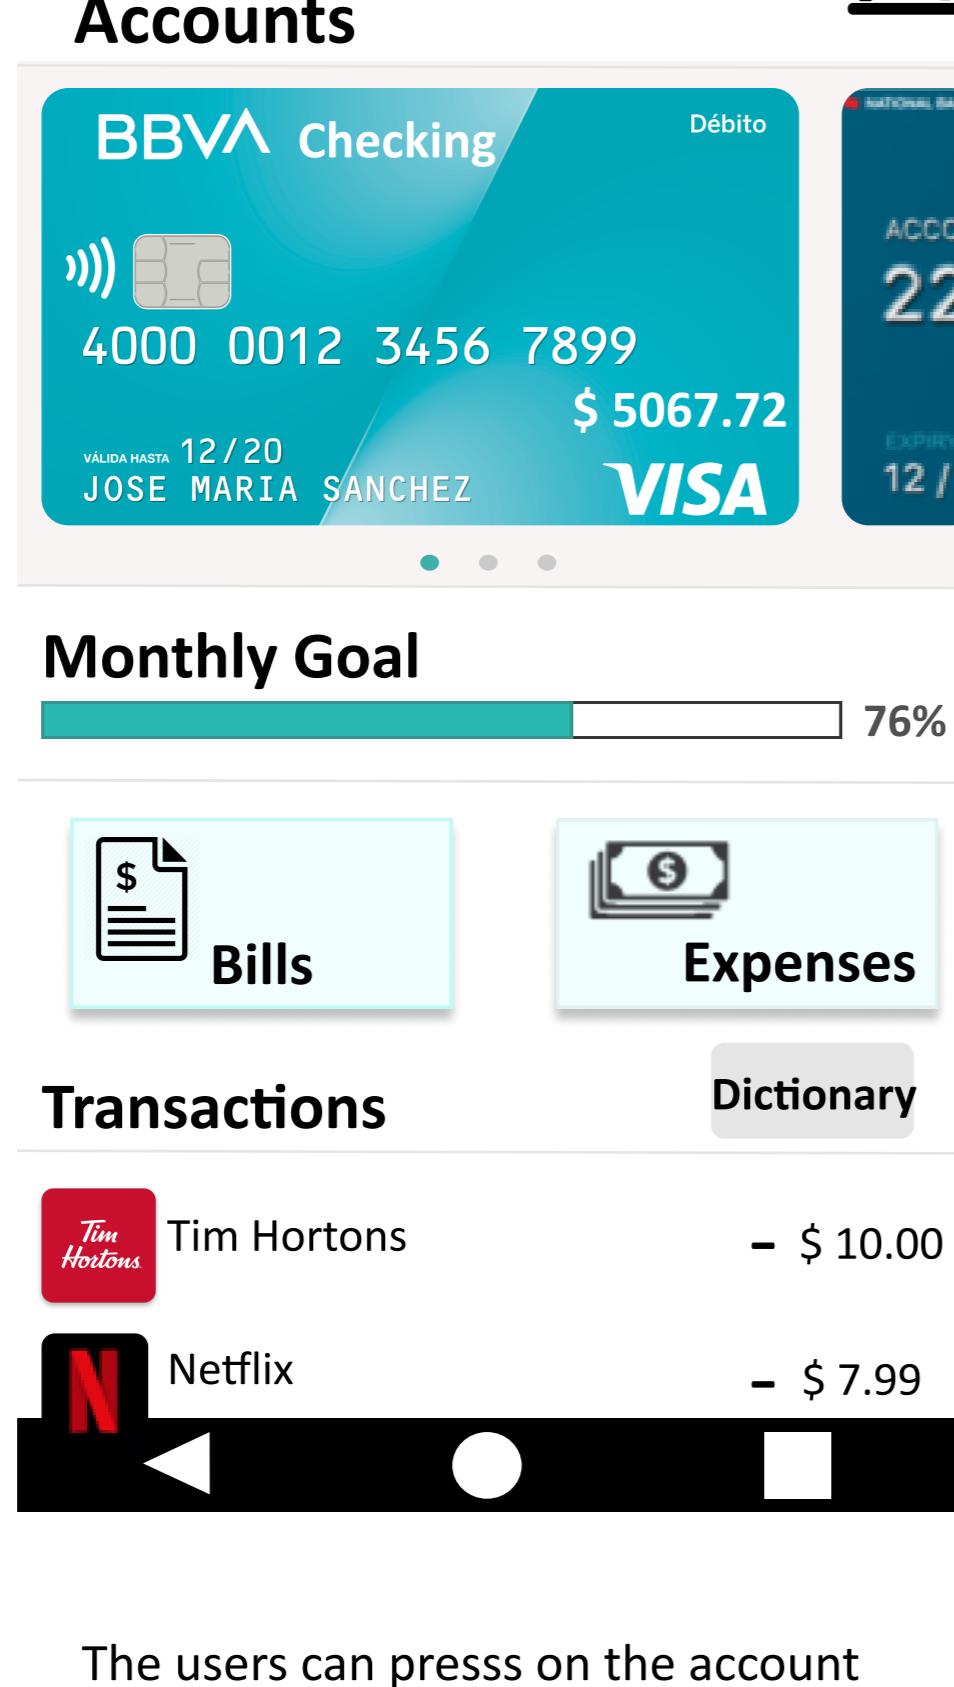

The users can mange and pay they bill the bills are one time payment and the user can go back and send it every month if he wishes. The receiver do not take money without permission the user has to send it.

Once the user chooses Bills he/she can see bills due and the bills paid. they can scroll down

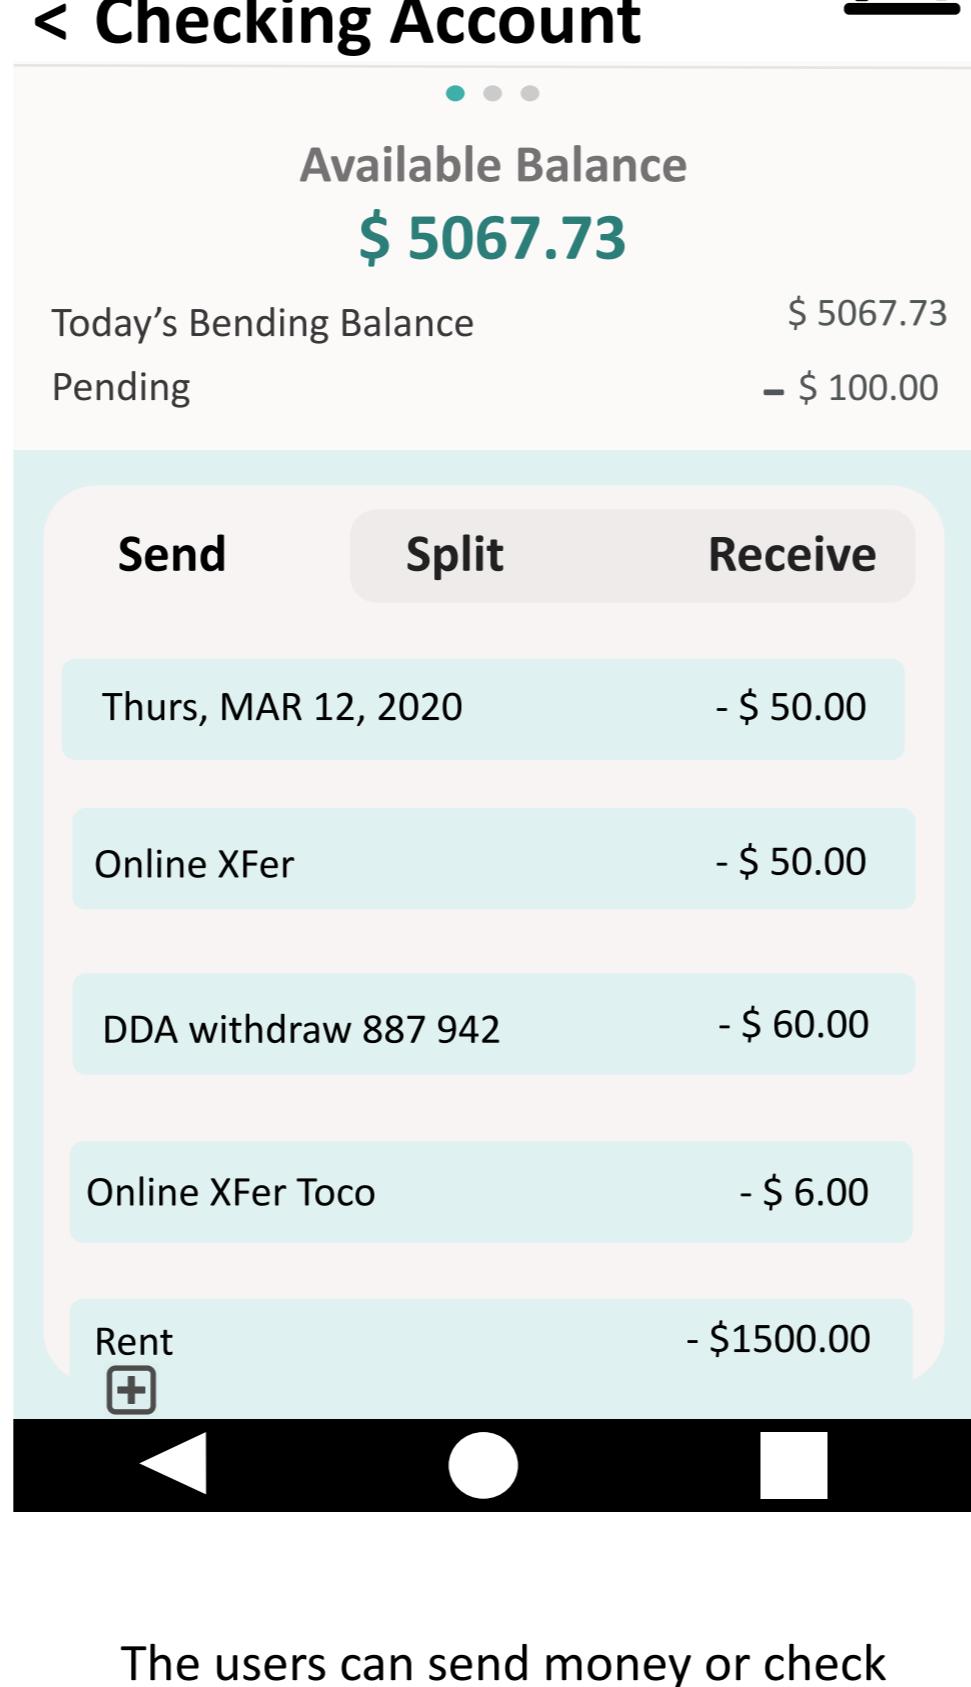

The user can then pay bill once he chooses the destination.

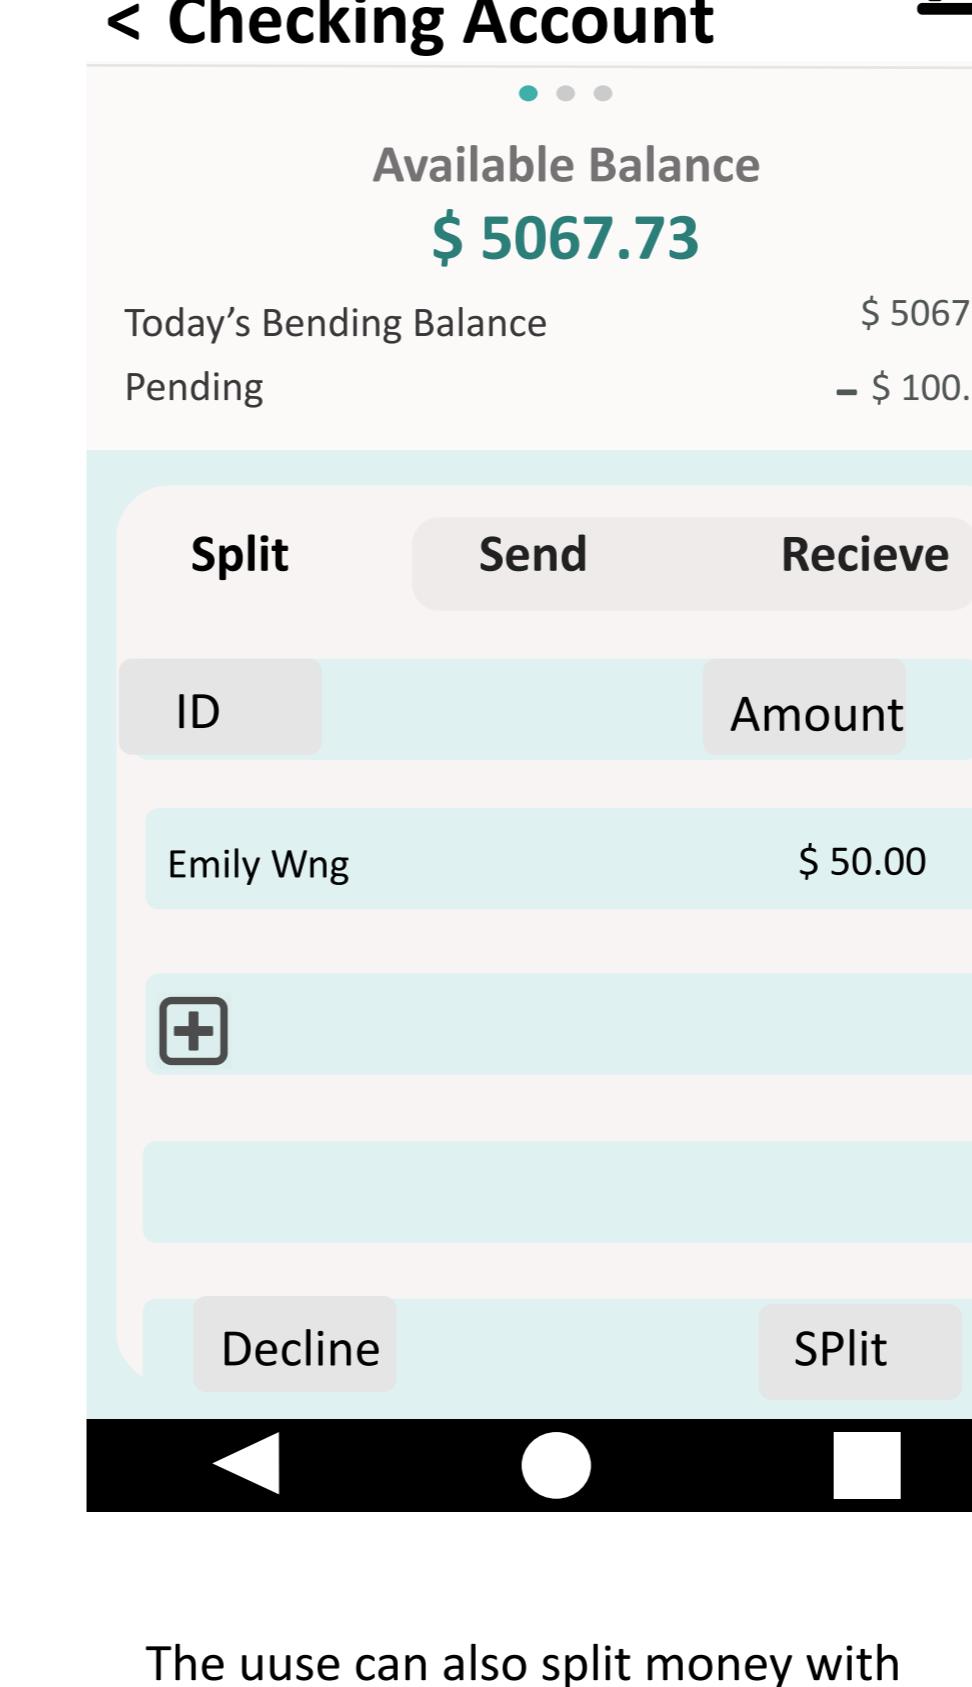

The users can check their accounts and send split or recive money from any account they want

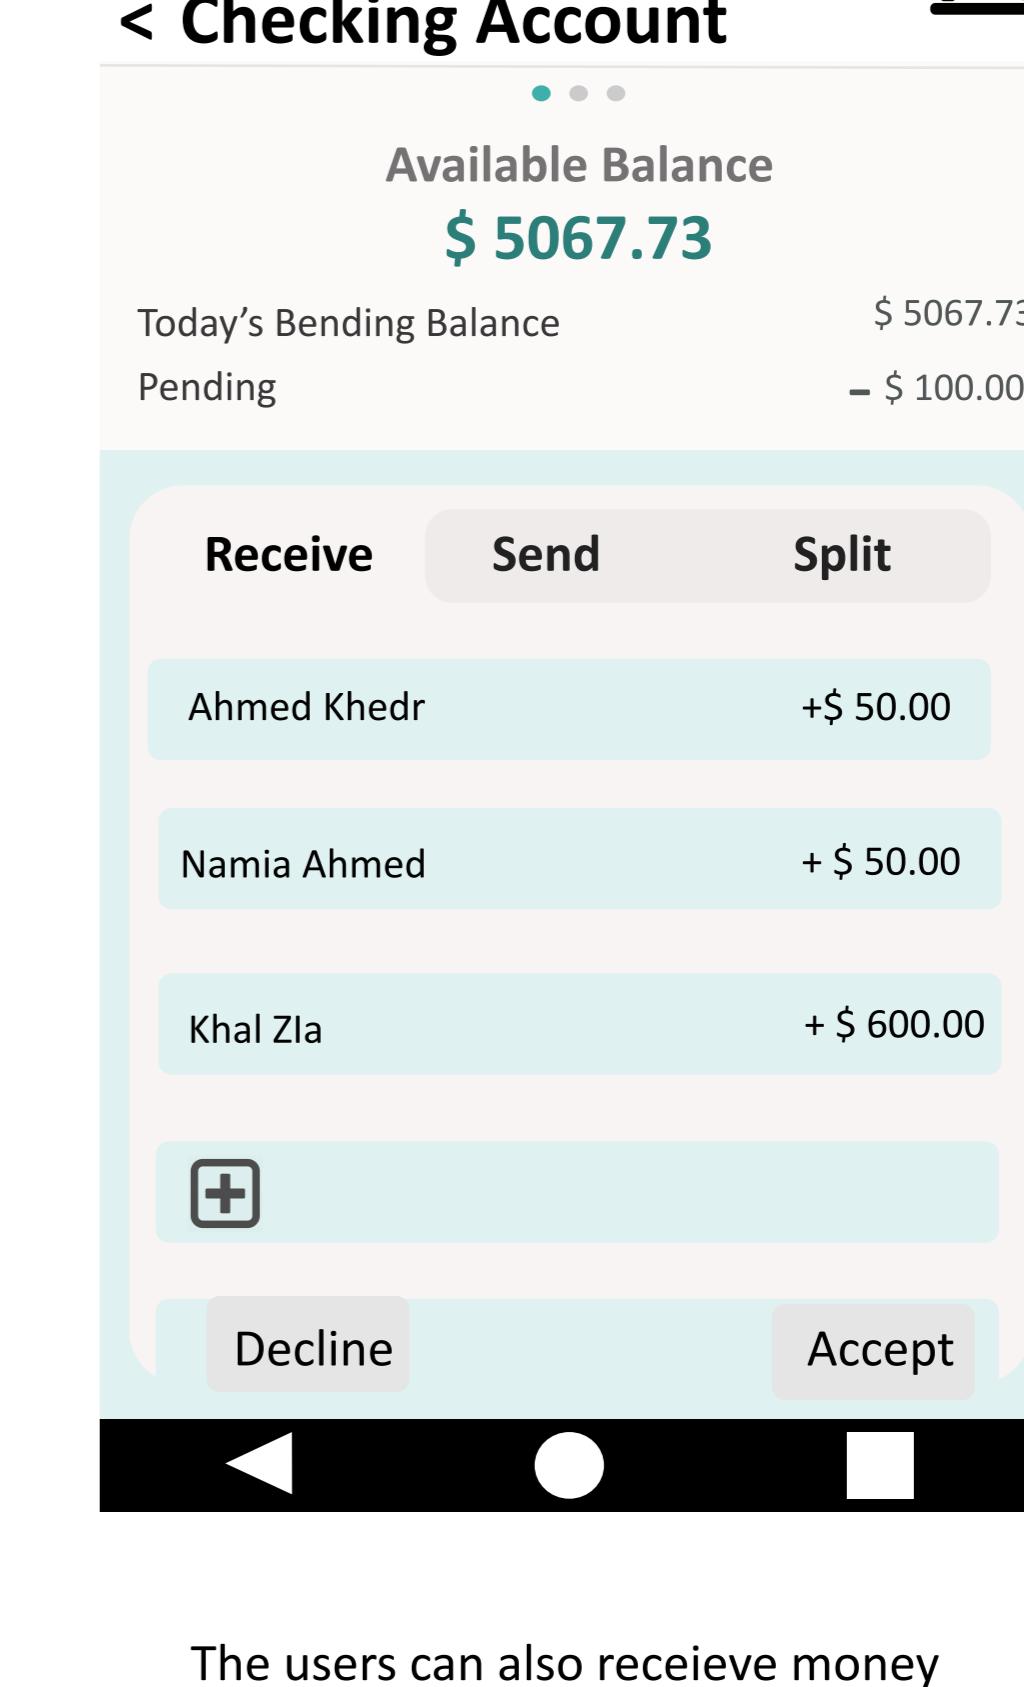

The users can presss on the account they want they can scroll left to see more accounts and choose one

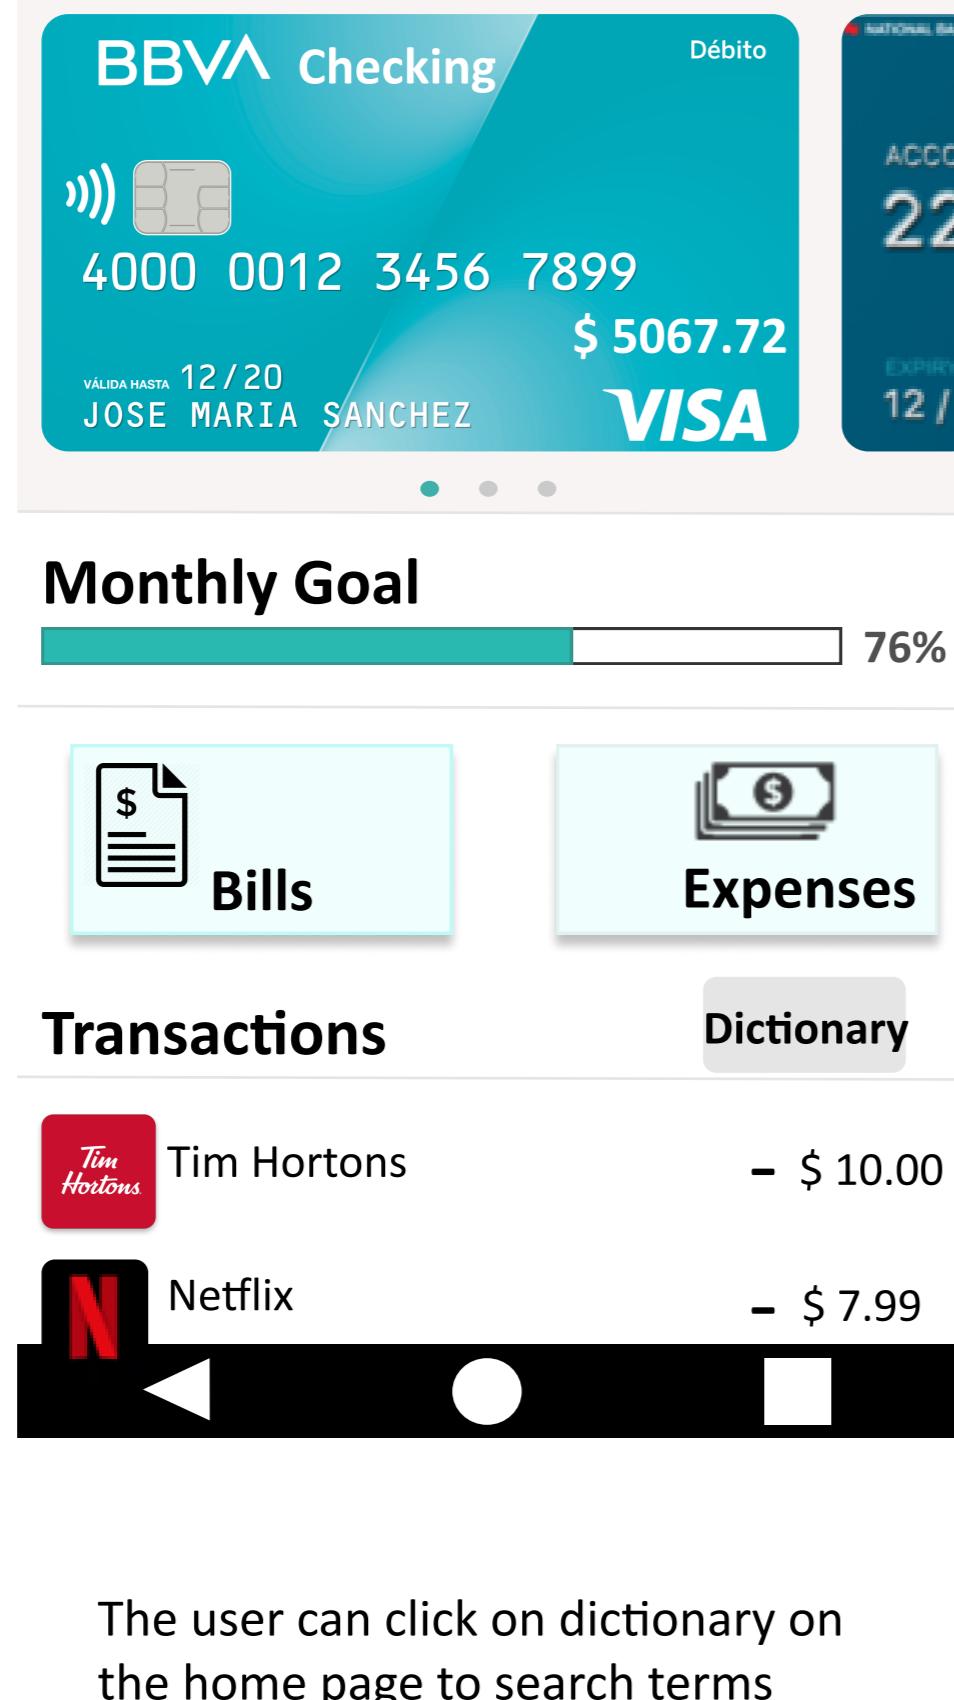

The users can send money or check the history of the money they sent . if they want to send money they would press on the plus sign and add the send information and send money.

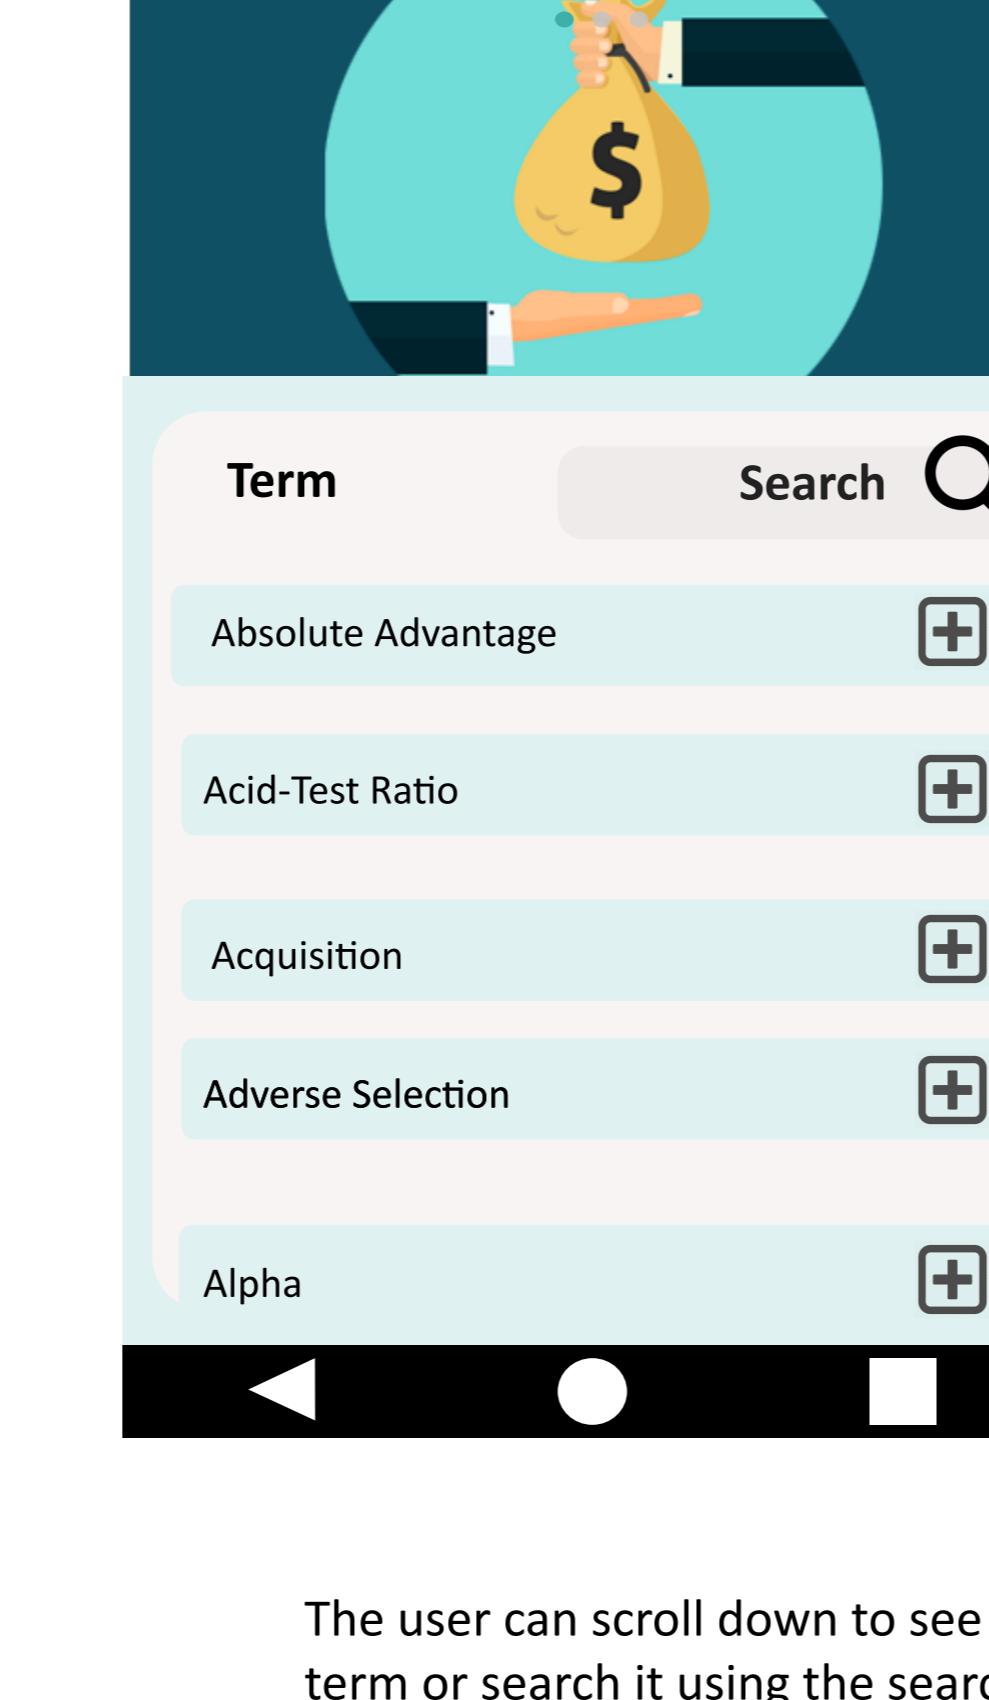

The use can also split money with their friends they would press on the sign add a new person and their infomration then split the amount then split or decline

The users can also receive money by accepting the money sent to them or they would ask ppl for money by choosing the plus sign they would requst money from friends.

The users can look up for financial words using the dictionary.

The user can click on dictionary on the home page to search terms

The user can scroll down to see the term or search it using the search function. once the work comes up the user can then press of the plus sign and the word defintion would come up
